Project report

➤ MET-R-I-S Portal

The MET-R-I-S portal is operational since October 2007. Municipal managers have now access to a web portal allowing them to manage the collection and treatment contracts for the municipal waste generated on their territory. Thanks to the version 5 of the SIG, the subcontractors can electronically transfer ground data into the municipalities MET-R-I-S portal accounts.

➤ Deployment of the MET-R-I-S portal

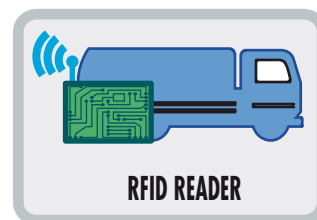

The deployment of the MET-R-I-S portal for the municipalities began on February 20, 2008.

➤ Proof of concept

The proof of concept and the installation of the RFID equipments (identification by radio frequency) installed on the collection trucks were completed in December 2007.

➤ Portal SIG

The configuration of SIG accounts for the private stakeholders (subcontractors) involved in the collection and the treatment of the municipal waste generated on the MRC territory started on February 22, 2008.

Further steps

1. The ground data reading tests on the RFID equipments will start March 2008;
2. The training of the municipal users and the private stakeholders (subcontractors) will take place between March and April 2008;
3. The final report will be presented in spring 2008.
