Status Report

➤ Performance report

The details pertaining to the contracts for municipal waste collection and management for the 7 municipalities of the MRC de Thérèse-De Blainville are now available on the MET-R-I-S portal. The municipal managers have access to their performance report: % of the collection for disposal, % of the collection for recycling, costs by collection, ...

➤ Transfer of ground data

The implementation of the exchange protocol between the Tricentris data base – a management center for municipal waste (receiver) – and the municipal's MET-R-I-S account is a success. The ground data (truck weighing) gathered by the receiver are electronically transmitted to the participating municipalities:

- One unique entry for the same event;
- Daily and secure transfer of data;
- Productivity gain, minimization of multiple data entry errors, interoperability, ubiquitous flow of information, ...

Thanks to this data exchange protocol, all the participants involved in the collection and the management of municipal waste are working in **Community**.

Further steps

1. Installation of the RFID tags and reader on the collection bins and truck;
2. Tests and validation of the ground data transfer obtained by the RFID equipments: Collection type, municipal sector, address, collection dates and frequencies, ...;
3. Publication of the Final Report.
